Dear ENERGY STAR® Computer Partner or Other Interested Party:

Since 2002, EPA has been implementing the compliance testing initiative, which supports our efforts to ensure that the program delivers on all of its energy-efficiency promises. Today, I am writing to inform you that computers have been selected for testing.

Shortly, EPA will begin testing a sample of qualified computers to verify compliance with the current ENERGY STAR specifications. The goal of this testing initiative is to identify potential compliance problems and set in motion a review process to ensure manufacturers take corrective measures as appropriate.

Partners whose product(s) have been selected for testing will be notified soon in writing. The notification letter will indicate the model(s) selected and the time frame for testing. OnSpeX, an independent laboratory located in Atlanta, Georgia, will test the selected products.

Each model will be tested according to ENERGY STAR product testing guidelines. The guidelines for computers can be found at <http://www.energystar.gov/library>. Click on “Product Specifications” under “Product Manufacturers” and then on “Eligibility Criteria Version 4.0” to the right of “Computers.”

Once testing is complete, partners will receive written notification of the results for their products. Should a model fail to meet the ENERGY STAR specifications, the partner will have 30 days to submit information based on its own test data to verify that the model is in compliance with the current specifications. EPA will remove the model in question from the qualifying product list *only* if the partner fails to adequately respond within the 30-day time frame, the partner’s test data does not fulfill the ENERGY STAR requirements, or the partner acknowledges the product is mislabeled. The procedure for data submittal will be outlined in greater detail in a letter to all manufacturers with specific products under test.

In closing, it is important to note that ENERGY STAR will continue to be a self-certification program, although EPA requires third-party test data for some product categories and reserves the right to request additional test data on a case-by-case basis. This compliance testing initiative does not replace industry-testing efforts; rather, it is designed to monitor the marketplace, protect EPA and partner investments in ENERGY STAR, and ensure that consumer confidence in ENERGY STAR is never compromised.

Thank you for your continued cooperation and support of the ENERGY STAR compliance

testing initiative. We are committed to maintaining open communication and dialogue with manufacturers and their representatives throughout the testing process. If you have any questions or concerns, please contact Kathleen Vokes with EPA at (202) 343-9019 or Josh Forgotson with ICF International at (202) 862-2955 or iforgotson@icfi.com.

Sincerely,

A handwritten signature in black ink that reads "Ann Bailey". The signature is fluid and cursive, with "Ann" on top and "Bailey" below it.
